

## User manual

Woo is a mobile application that builds a platform between patients and hospital, simplifying the tedious process for patients and reducing the workload for medical staff.

On the **patients' end**, we provide:

1. User profile system for patients
2. Online appointment scheduling system
3. Digital medical-record
4. Digital prescription (read only)

On the **medical staff end**, we provide:

1. Online appointment checking and scheduling system
2. Online appointment search system
3. Medical record management system
4. Online prescription system

For patients' end:

Patient can sign up a patient account and request an appointment for the registered hospitals on Woo platform. Once the appointment request is approved, the patient page will display all the upcoming appointment with detailed information about the time, hospital name and doctor's name.

Patients are also able to check their online prescription and medical record. In order to ensure the reliability of these documents, patients are only able to check them. Only doctors have the rights to write on it.

For medical staff end:

Receptionist is able to check all the pending requests and choose to accept or reject the appointment requests. If one appointment is approved, both the patient's homepage and the doctor's homepage will display the appointment with detailed information.

Doctors are able to see the upcoming appointment for today in their own homepage. And doctors are also able to search all the appointment for one patient or all the appointment for one day.

Doctors are able to see patient's medical records and have the right to write the online medical records and prescription for the patient.
